# Challenges of Traditional Ticket-based Parking Management Systems

## Manual Processes

- Take or validate a paper tickets
- Security risk, especially in parking lots with entrances or exits located on slopes

## Limited Capacity

- Inability to handle large number of vehicles
- Congestion and long wait times during peak hours

## High Costs

- Expensive installation, maintenance, and operation
- Especially for smaller parking facilities

## Limited User Experience

- Non-user-friendly experience
- Use of cash-based payment systems

## PART 01

# ANPR Ticketless PMS

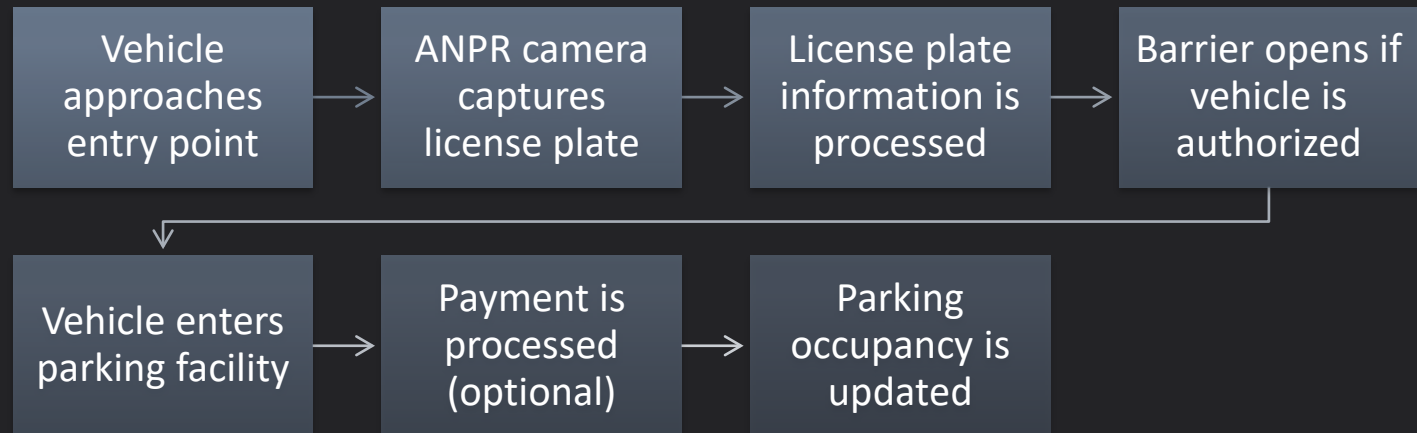

- What is ANPR ticketless PMS
- Working flow

## What is ANPR PMS

- ANPR stands for Automatic Number Plate Recognition.
- ANPR PMS uses cameras equipped with ANPR technology to capture license plate numbers of vehicles entering and exiting the parking facility.
- ANPR PMS eliminates the need for physical tickets, reducing printing and maintenance costs.
- ANPR technology allows for a more efficient and faster entry and exit process, as vehicles can enter and exit without stopping at a ticket dispenser.
- ANPR PMS provides accurate and reliable tracking of vehicles, making it easier to identify parking violations and manage occupancy levels.
- ANPR PMS can integrate with other parking management systems such as payment and security systems, improving overall efficiency and security.

# Entry Working flow

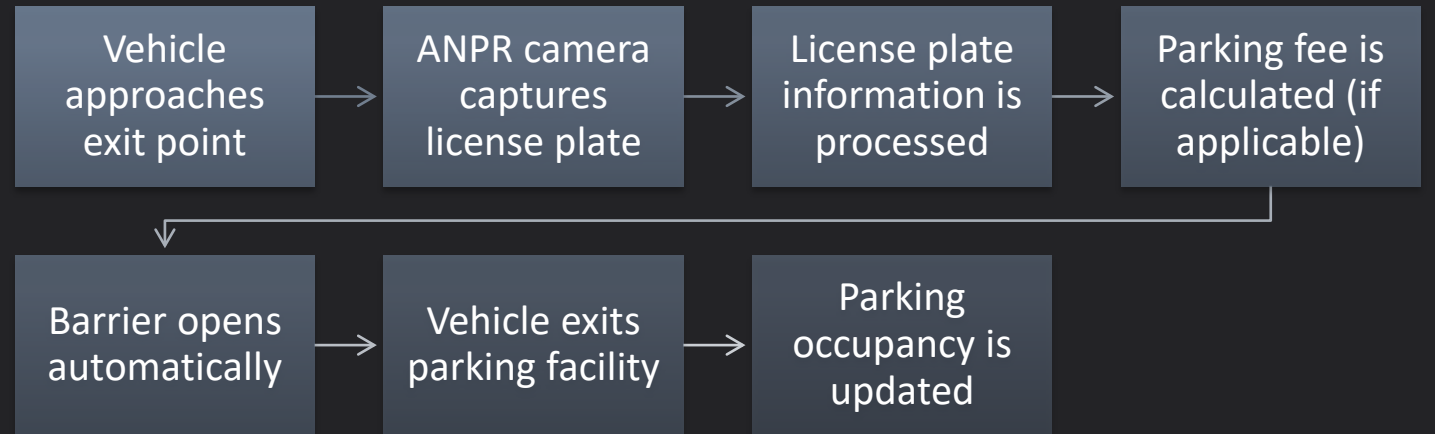

1.3

← Ausfahrt / Exit

# Exit Working flow

## PART 02

---

# ANPR PMS Advantage

- Fast entry & exit
- Diverse parking payments way
- Parking space reservation
- Cost savings and increased revenue
- Cost savings and increased revenue
- More environmentally friendly

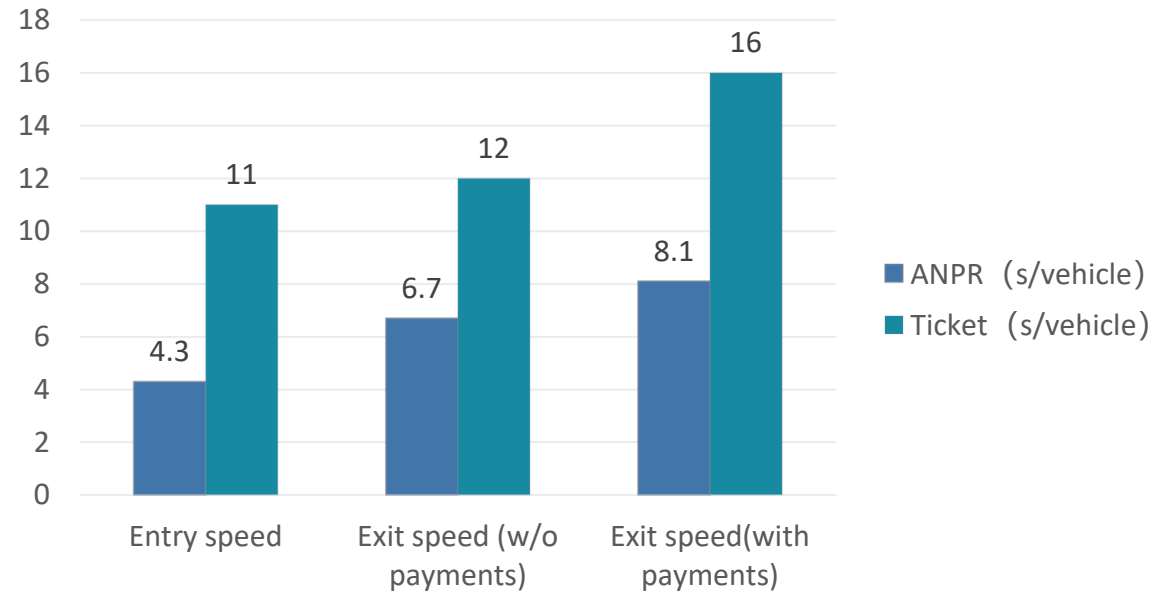

## Fast entry and exit

**Entry speed: increased by 155%**

**Exit speed: increased by 98%**

The system eliminates the need for drivers to stop and take / validate a ticket, reducing the time it takes to enter and exit the parking lot. This results in a better user experience and can reduce congestion during busy times.

## Diverse parking payments way

In addition to the traditional method of parking payments , license plate recognition technology enables the parking lot to enter the era of mobile payments.

Driver can use their mobile phones to scan the parking lot's QR code or open a mobile payment app, enter their license plate number, and prepay for parking to reduce the time spent queuing to pay for parking.

Support integrated with all main E payments way

## Cost savings and increased revenue

- ANPR PMS eliminates the need for physical parking hardware, such as ticket dispensers and checkers, reducing the initial investment cost.
- With ANPR PMS, there is no need to purchase and distribute paper tickets or Bluetooth cards, which can save costs in the long run.
- ANPR PMS requires less installation and maintenance compared to traditional parking systems.
- The use of ANPR technology can also improve parking efficiency, leading to increased revenue from more cars being able to park in the same space.

## Reduction in parking lot staff

- 24/7 fully automated parking system reduces the need for human staff at the parking lot
- Automated system handles tasks that would have been done by human staff, such as ticket checking, fee collection, and parking management
- Reduction in the need for human staff reduces the cost of labor for parking lot operators
- Automated systems can make parking lot operations more efficient
- Staff can be allocated to more critical areas such as customer service and security

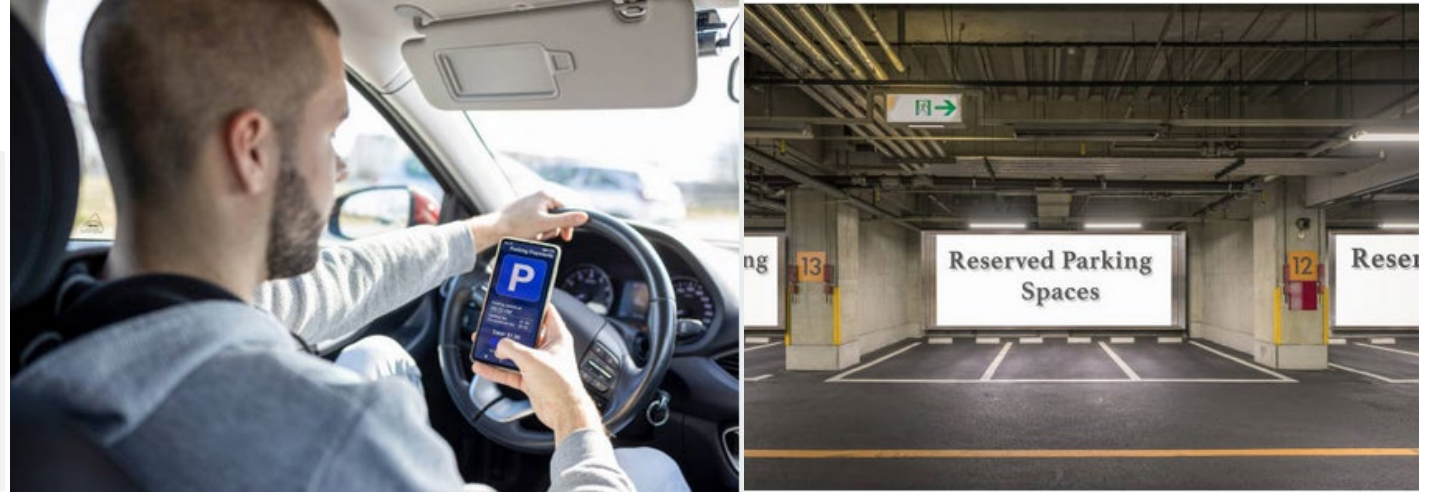

## More environmentally friendly

- ANPR systems can help reduce paper waste in parking lots, making them more environmentally friendly.
- The use of ANPR systems can also help minimize the time vehicles spend idling, reducing the amount of emissions generated by cars.
- Improved air quality resulting from reduced emissions can benefit the health of individuals and communities surrounding the parking lot.

## Parking space reservation

- Reserve a parking space through plate No.
- Navigate to the reserved parking space
- Alert when the parking space is occupied
- Automatic payment of parking fees

### Parking space search

- Search for nearby parking lots and available parking spaces information.

### Reserve space

- Enter reservation time and license plate number to reserve a parking space, then use a third-party map app to navigate to the reserved parking spot with just one click.

### Notification

- The reserved parking space can be monitored through the software to detect its usage status. If the space is occupied, the software can push a notification to the person who made the reservation.

### Diverse payments way

- Support payments by cash, mobile etc

# PART 03

## KEYTOP ANPR

### Unique advantages

---

- AI training center
- Unmanned parking management
- Mobile App for parking lots management
- Centralized management platform
- Customizable software and hardware

# 3.1

## AI Training Center:

Let every parking 's traffic flow smoothly and quickly

Plate No.

Car Model

Car Color

Traffic flow

- Abnormal traffic conditions in the parking lot are detected by the AI training center.
- Info about the vehicles involved, including license plate numbers and vehicle types etc, is automatically collected.
- The collected information is sent back to the AI training center for optimization of the license plate recognition algorithm.
- The optimized algorithm is automatically updated in the parking lot system..

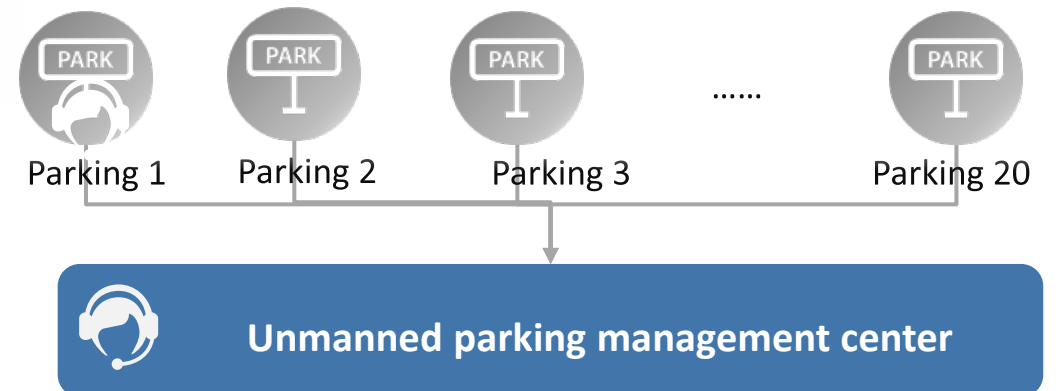

## 3.2 Unmanned parking management

### Unmanned parking management system

- Ability to detect abnormalities in parking lot passages
- Remote customer service available through intercom
- Remote customer service can assist with various tasks, such as opening gates and correcting license plates
- Guidance provided to parker regarding payment of fees
- Actions taken based on situation at the scene.

*Parking made simple with our unmanned assistance*

## 3.3 Manage parking lots anytime and anywhere.

KEYTOP

- Parking lot management not limited by geographical location
- Ability to manage parking lots anytime and anywhere
- **Mobile app** provides mobile management of entire parking lot management process
- Real-time push of visualized reports on both mobile and PC platforms.

### Business insight

- Daily and monthly reports
- Traffic flow analysis
- Income analysis

### Financial Hub:

- Payment records tracking
- Refund management
- Invoice management

### Remote Management:

- Maintenance and inspection management
- Remote task management

### Vehicle Tracking:

- Entry/Exit record
- Season parking car management
- Remote gate opening

### Visitor management

- Authorized visitor management
- Visitor car release
- ....

### E-coupon

- Scan to issue E-coupon
- Batch coupon issuance
- Coupon statistic

# 3.4 Centralized management platform

## Centralized management

Parking operator who have multiple parking can easily manage all their parking in one platform.

## Healthy rate

Real time monitoring of operation status for each parking,

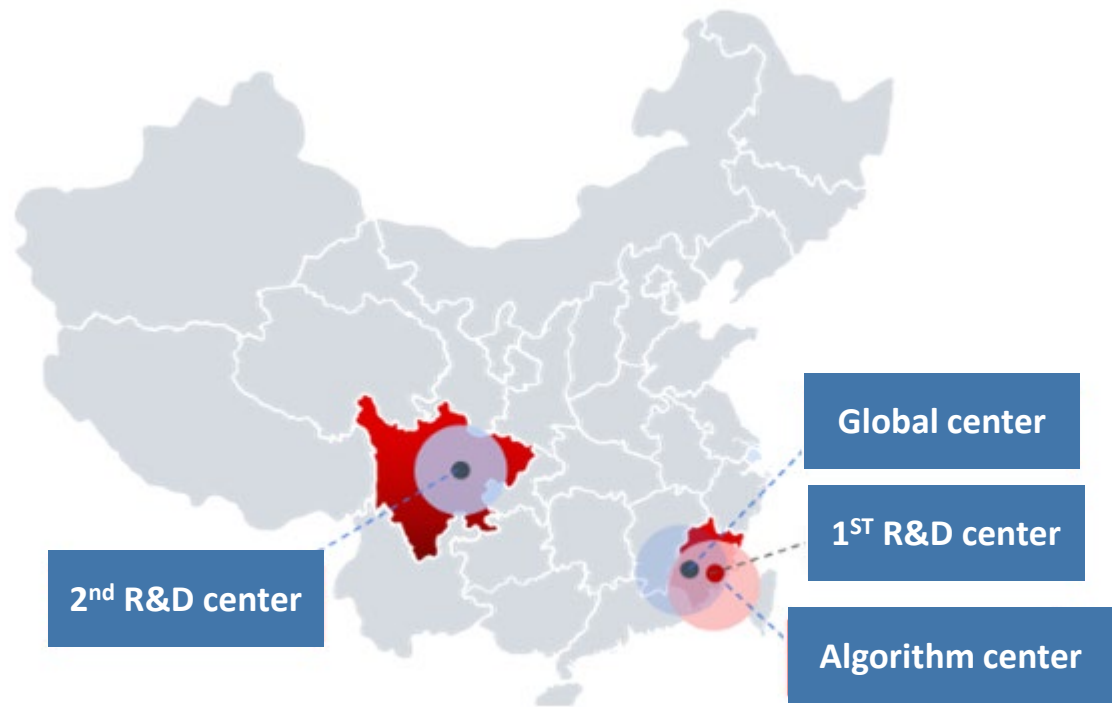

## Monthly Report

Comprehensive, rich, standardized monthly parking operation reports are available in real time.

## Support customization

## Professional R&D team

Hardware+Software+Apps+Algorithm

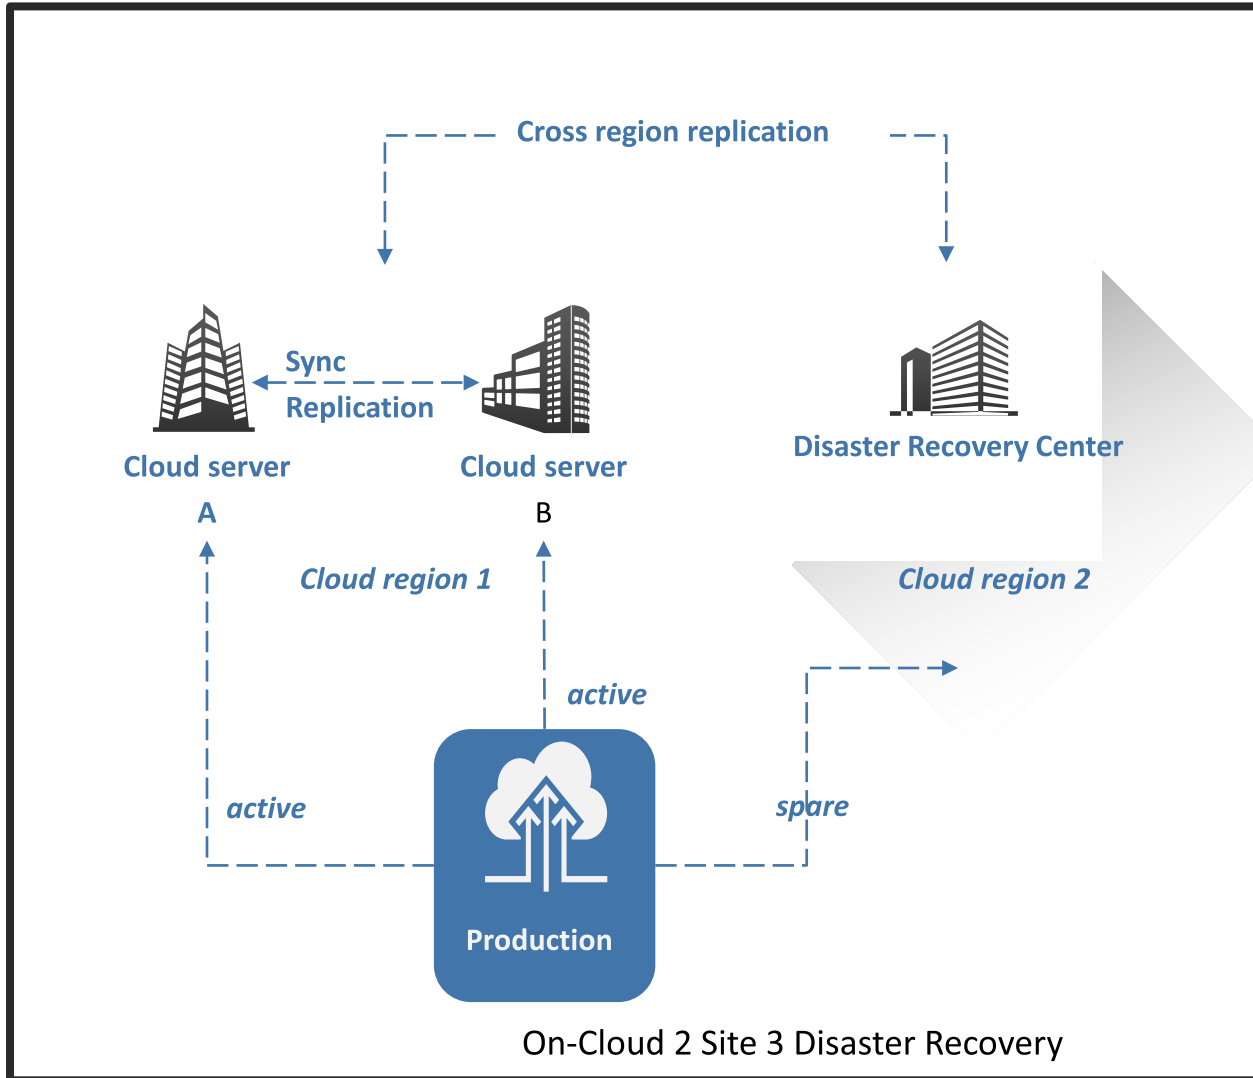

## Powerful customize capabilities

Years of customization experience in multiple industries

# 3.6

## More stable and reliable system

### More safe

- Cloud storage and cluster backup are used to ensure data integrity.
- Cooperate with first class cloud supplier .
- Can enjoy the double security of parking data storage and communication without additional investment.

### More stable

- The parking is completely free from the physical server virus infection , Server failures no longer affect parking operations.
- Choose an advanced and reliable disaster recovery mechanism to minimize disaster impact on business operation.

### Continuous operation

- Data integrity and business continuity can still be warranty under exception such as hardware replacement, power outages and network interruptions etc.
- After business switching under abnormal conditions, it can ensure that core business and data are protected in a timely manner and ensure high system availability.
- Ensure that core business and data are protected timely under abnormal conditions to ensure high system availability.

**Thank you !  
Looking for cooperation !**
